

# Your simple, secure bridge to the government market

---

## Reduce your time to market

cloud.gov lets you make your bids simpler and smaller. That means less to hash out with agencies — and less time waiting to get started.

## Minimize your risk

Every component of cloud.gov is built for compliance and FedRAMP-authorized. That means less security and compliance work for you.

## Use technology you can trust

cloud.gov is based on industry-standard Cloud Foundry. That's the same tech used across the Fortune 500.

---

## Your code. Our platform.

cloud.gov is an application-ready platform built on top of AWS GovCloud that minimizes the hassle of delivering for government. With cloud.gov, teams can build, run, and authorize cloud-ready systems or migrate legacy government systems quickly and cost-effectively.

---

### Support these and other agencies already using cloud.gov

Bureau of Alcohol, Tobacco, Firearms, and Explosives

Department of the Interior

Department of Education

Federal Bureau of Investigation

Internal Revenue Service

General Services Administration

---

## Reduce your time to market

Government contracts can seem endless. But with cloud.gov, your bids become simpler — more focused on the value you provide to each agency's mission, rather than the details of how you'll get to production.

And with our turnkey application servers, databases, storage, and indexing, you get immediate, self-service provisioning and management of your own environments.

## Minimize your risk

Meeting security and compliance requirements can take months, and need constant monitoring. With cloud.gov, agency ATOs can happen in weeks; you manage your code and we help with ongoing maintenance. It's a simple, secure bridge to the government market, especially for software typically deployed on-prem.

cloud.gov has a FedRAMP JAB P-ATO at the FISMA Moderate impact level and DISA Impact Level 2; plus, every offering in cloud.gov is inside the FedRAMP JAB audit scope. That makes compliance simpler, even for complex, large-scale, and high-volume systems.

## Use technology you can trust

cloud.gov is built on industry-leading open-source tools, ensuring your access to an ecosystem of contractors, specialists, and trainers. It's the same tech that IBM, Pivotal, SAP, and SUSE rely on to deliver their services.

If you don't already have experience with Cloud Foundry, you'll find it's easy to pick up and applicable across sectors. The platform is well-structured and well-documented, with an active community and years of conference materials to draw from.
